

EXTENDING MOWEBA FOR MOBILEAPPS WITH FUNCTIONS IN THE CLOUD

Emanuel A. Sanchez F.

5 de abril de 2018

CIbSE - SET

DEI - FCyT - UC

“This work has been funded by CONACYT through the PROCIENCIA program with resources from “Fondo para la Excelencia de la Educación e Investigación - FEEI” from FONACIDE. This work has been developed under the project “Mejorando el proceso de desarrollo de software: propuesta basada en MDD” (14-INV-056).

Motivation

Popularity of Mobile Applications

Motivation - Mobile Apps

Global Mobile vs. Desktop Internet User Projection

Previous Work

SMS - State of the Art

SMS of the State of the Art¹

There isn't a work including:

- **ASM**
- **Separation of Pres. & Beh.**
- **Function Oriented Nav.**

Additional aspects:

- **Unified Modeling**
- **Standard Language**
- **MDD and Open Source**
- **Native Mobile Applications**

Common aspects:

- **MVC Schema**
- **REST Architecture**

Additional Comments:

- **Low graphical modeling**
- **Cloud implemented in JAVA**

¹Publications in CLEI 2016 and CLElej 2017

Propose a model driven approach for the modeling and generation of the network communication of the MobileApps-FC as an alternative for addressing the extra effort caused by the difficulty of platform portability

Proposed Solution

Adoption of MoWebA

- **ASM**
- **Separation of Pres. & Beh.**
- **Function Oriented Nav.**
- **MVC Schema**
- **Standard Language**
- **Graphical Modeling**

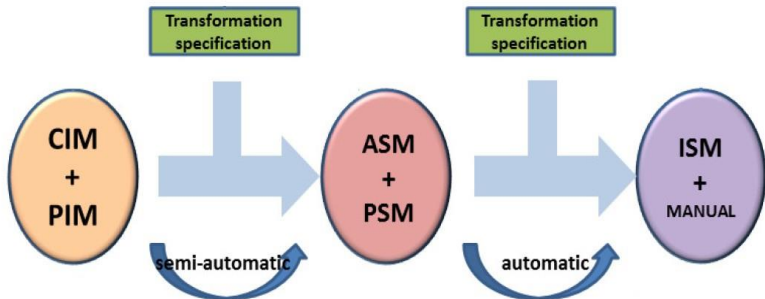

Proposed Solution - Adoption of MoWebA

Based on Model Driven Architecture - MDA

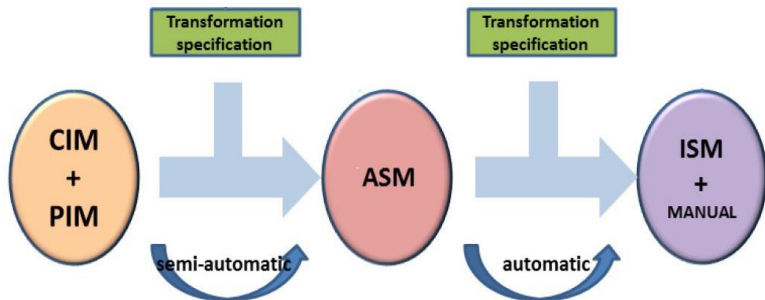

Proposed Solution - Adoption of MoWebA

MoWebA - Development Stages

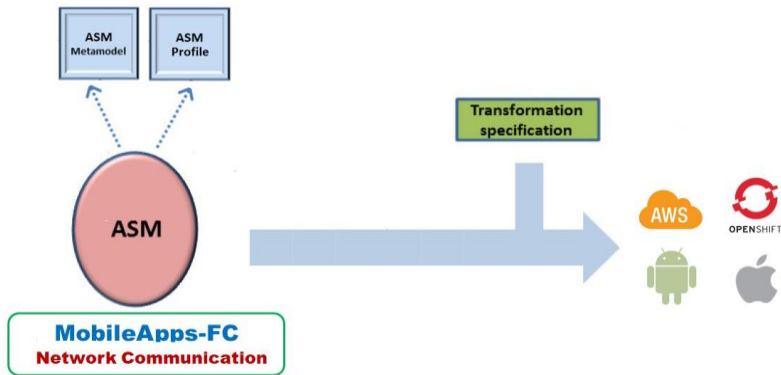

Proposed Solution - Adoption of MoWebA

MoWebA - Development Stages - ASM

Proposed Solution - MoWebA Mobile

MoWebA - Network Communication - ASM

Proposed Solution - Extension Process

Proposed Solution

Extension of MoWebA

MoWebA Mobile

- **Unified Modeling**
- **REST Architecture**
- **MDD and Open Source for cloud**
- **Native Mobile Applications**
- **Javascript - Node.js for the cloud**

Proposed Solution

Extension of MoWebA

MoWebA Mobile

Network Communication

Proposed Solution - Network Communication

Based on:

- **REST Architecture**
- **Communication Functions**
- **Light-data**
- **Load-image**
- **Download-files**
- **Upload-files**

Proposed Solution - Development Process

ASM
Model
Network
Communication

magicedraw

Comparative Study

Comparative Study

RQ1- Effort difference through development time

- **Substantial difference of effort in favor of MDD approaches**
- **WebRatio Mobile had a better time, but ...**
- **MoWebA's development time can be improved**

Comparative Study

RQ2- Differences which could affect the modeling effort

- **MoWebA Mobile considers a unified modeling**
- **WebRatio Mobile considers two models: mobile and cloud**

The unified modeling helps to save design effort

- **MoWebA Mobile considers M2M semi-automatic rules**
- **WebRatio Mobile does not consider such M2M rules**

The M2M rules can help to save effort in the modeling process

RQ3- Number of platforms considered

- MoWebA Mobile considers:

-Two mobile platforms

-Two cloud platforms

- MoWebA Mobile considers:

-Two mobile platforms

-One cloud platform

MoWebA's cloud code is based on Docker, which eases the code portability

Conclusions

Extension of MoWebA to develop the MobileApps-FC

ASM to design and to generate the network communication

Comparative study with MoWebA Mobile

Future Works

Build a specific tool for making simpler and faster the modeling

Build transformation rules between the PIM and the ASM

Improve validations of our proposal

Thanks

Proposed Solution - ASM Metamodel

Proposed Solution - ASM Profile

Proposed Solution - Transformation Rules

Mapping between the model and the target code

M2T transformation rules

Languages: MTL, OCL and Java

Target code generated:

- **Mobile: Swift for iOS, Java for Android**
- **Cloud: Javascript - Node.js for Openshift and AWS**
